INTRODUCTION

Fighting global warming and climate change is a key challenge for the European Union. As recent citizens’ initiatives all over Europe revealed, an increasing number of Europeans are deeply concerned about the impacts of climate change and the lack of political consensus to take action. These initiatives can be perceived as a wake-up call to traditional perception of climate challenges. The expectations on the European Union to act are very high and climate change features at the top of the program of the new European Commission. Nevertheless, the competences, powers and resources of the European Union to act and make a radical change in Europe and in the world in this field are limited. Building a united, democratic and sovereign Europe and saving the planet are more and more two faces of the same coin, a common challenge and a common mission.

A given context, the conference, organized by the Union of European Federalists Lithuania and its European organisation, in cooperation with other organisations aims to deal with following questions:

- What is the status quo of climate change and main actions to contrast it at European and global level?
- What is the European Union doing and what can it do more?
- How to find a compromise between different political visions and European states towards a joint climate action plan?
- What policies and resources would the European Union need to make a radical change in this field?
- How to address the costs of changing our economies and our societies and make our environmental ambitions affordable?
- Saving Earth not only in parliaments: What can each of us do for a more eco-friendly society?

The European Meet-Up is a participatory policy-oriented event conceived to provide civil society with a space to share main concerns of the current state of Europe, forge a common view on the main challenges facing civil society in Europe and build long-term solid partnerships with like-minded stakeholders.

In this week-end seminar in Vilnius we discussed from various angles the deep connection between advancing European integration and fighting climate change at European and global level.

The event is organised by Union of European Federalists (UEF) and Europos federalistai Lietuvoje with support of Konrad Adenauer Stiftung and Renew Europe Lithuania.

BACKGROUND NOTE TO THE TOPICS OF THE SEMINAR

Climate Change in a nutshell

- Over the course of millions of years, the global climate has experienced fluctuations. Since the beginning of industrialisation, however, the composition of the atmosphere has changed as a result of greenhouse gas emissions. This global warming intensifies the natural greenhouse effect and is leading to major disruptions to the climate, having a significant effect on people and nature. Measurements show that the average temperature at the Earth’s surface has risen by about 1°C since the pre-industrial period. The impact of these transformations and their consequences for human life have fuelled the debate within the public opinion.

- Climate change science seeks to understand the physical, chemical, biological and geological processes, and the interactions among these processes, that produce climate. The realisation that Earth’s climate might be sensitive to the atmospheric concentrations of gases that create a greenhouse effect is more than a century old. However, until the 1950s, many scientists thought the oceans would absorb most of the excess CO₂ released by human activities. Several authors have proven this thesis wrong and since then, science has contributed to the observance of changes in the climate system.

- For example, scientists investigate climate change through samples of ice taken from deep below Antarctica, containing bubbles of air from 650,000 years ago that allow us to measure concentrations of CO₂ and methane in the past. Also, The Mauna Loa Observatory in Hawaii, has served as a good source of indicators of global CO₂ levels, due to its remote location, where the air is undisturbed. Furthermore, Satellite images can be used to show changes in Arctic sea ice cover over a period of time. Using knowledge of past climates to qualify the nature of ongoing changes has become a concern of growing importance during the last decades.

- Every 6 or 7 years, an important scientific body called the Intergovernmental Panel on Climate Change (IPCC), which gathers a group of 1,300 independent scientific experts from countries all over the world under the auspices of the United Nations, releases a report on scientific evidence on climate change. In its Fifth Assessment Report, the IPCC concluded there’s a more than 95 percent probability that human activities over the past 50 years have warmed our planet. The impacts of climate change can already be seen and will become more severe and widespread as global temperatures rise. How great the impacts will become depends upon our success in reducing greenhouse gas emissions.

- In recent decades, changes in climate have caused impacts on natural and human systems on all continents and across the oceans. Impacts are due to observed climate change, irrespective of its cause, indicating the sensitivity of natural and human systems to changing climate. The consequences and impact of these processes to the human life, make of is one of the most serious challenges facing our world today. The first logical question one needs to ask is then: what is the world doing to revert this situation?

International action on climate change

- The first global approach results from the creation in 1988 of the Intergovernmental Panel on Climate Change (IPCC), which brought together thousands of scientists to assess scientific evidence on climate change and its impacts. By 1992, almost all countries in the world join the United Nations Framework Convention on Climate Change (UNFCCC), the main international treaty for fighting climate change. The UNFCCC adopted the Kyoto Protocol, the world’s first greenhouse gas emissions treaty.

- In 2009 a UN climate change conference in Copenhagen ends without an overall agreement on binding emissions cuts. Later on, in 2014, 100 world leaders meet for a UN climate summit in New York; while the IPCC's 5th Assessment Report on climate change declares that the below 2°C objective is still within reach.
In 2016, 174 countries formally signed the Paris Agreement in New York, the first ever binding compromise committing to reducing greenhouse gas emissions, to limit the increase in global temperature to well below 2 °C above pre-industrial levels.

Last developments within the international committed has shown a rather worrying scenario with a lack of commitment and great difficulties in accomplishing the implementation of the Paris agreement. The unsatisfactory outcome of the last international summit proves the need for further engagement and an opportunity for EU global leadership.

What is the EU doing for climate change?

In 2005 the EU launched its Emissions Trading System. Two years later the EU adopted its 2020 climate and energy package, with three key targets: reduce EU greenhouse gas emissions by 20% compared to 1990; increase the share of renewables to 20% of EU energy use; and improve energy efficiency by 20%. The EU adopted its 2030 climate and energy package, including a target to reduce EU greenhouse gas emissions by at least 40% compared to 1990. Today’s Commission aims to cut its emissions substantially by 2050 – by 80-95% compared to 1990 levels as part of the efforts required by developed countries as a group. The European Commission has also adopted an EU Adaptation Strategy seeking all its Member States to adopt national plans to cope with the inevitable impacts of climate change by 2017. A number of Member States have already developed adaptation strategies. However, the commitment of EU Member States is yet far from satisfactory and the leadership exercise on the global stage rather limited.

After the election of President Van der Leyen, her priorities for the new Commission term opened the hopes for a new momentum with her commitment to a European green new deal and a focus on sustainable economy.

The limited size of the European budget, the limited competences of the European Union on taxation (which is essential to change our economic and societal models) as we all European decision-making structures that allow member states with diverging short-term interests and different energy and industrial footprint to slow down or prevent European action, constitute a great limit to EU action. A transformation of the European Union into a sovereign entity, with more powers and resources, is essential to its success also in climate change.

The European public opinion will be essential to ensure that her promises turn into action and also ensure the EU capitalise its leverage within the international community.

From the Green New deal to Greta Thunberg

In the last few years climate change has produced an awakening of the public opinion, pressuring decision makers to take action. From the Friday for future initiatives in Europe and the various demonstrations all over the Union, to the apparent commitment of member States, there is an increasing perception that we need to take action.

What to do is already well understood. Adaptation, including sea defences, desalination plants, drought-resistant crops, costs a lot of money. This is a particular problem for poor countries, which risk a vicious cycle where the impacts of climate change continuously rob them of the hope for development. International agreements stress the need to support the poorest countries in their efforts to adapt to climate change and to grow wealthy enough to need less help.

Some of the political proposal require a change in our economic model. This has been a pressing issue for political debate as such transformation would inevitably affect a very sensitive issue in industrialised countries: job security and costs of living.

Finally, with the lack of commitment of some governments inside and outside the EU’s borders, as well as the negative global political trends, and the lack of clear implementations plan, even among the apparently most committed countries, a call for a society that engage with its future is essential.
READING LIST

United Nations Analysis and Reports on Climate Change

- IPCC special report on Climate Change, desertification, land degradation, sustainable land management, food security, and greenhouse gas fluxes in terrestrial ecosystems 2019: Climate change and Land Summary for Policymakers
- IPCC SRCCL, Chapter 6: Interlinkages between Desertification, land degradation, food security and GHG fluxes: synergies, trade-offs and integrated response options
- IPCC SRCCL, Chapter 7: Risk management and decision making in relation to sustainable development
- IPCC Special Report: Global warming of 1.5°C / Summary for Policymakers
- IPCC 2019 Refinement of the 2006 IPCC Guidelines for the National Greenhouse Gas Inventories

European Commission Reports and the way forward

- For a Union that Strives for more. European Commission President-elect Ursula von der Leyen's plans to make Europe the world’s first climate-neutral continent and calls on the new European Parliament and Commission to step up actions and to make climate protection a top priority for Europe in this crucial period.
- European Parliament Fact Sheets on the European Union: Combating Climate Change
- European Commission President-elect Ursula von der Leyen's Mission Letter to the Executive Vice-President-designated for the European Green Deal Frans Timmermans

Civil Society Organisation and Expert Analysis and initiatives

- The Green New Deal for Europe campaign for a swift, just, and democratic transition to a sustainable Europe
- The Economist / Global warming 101 “The past, present and future of climate change”
- European Environmental Bureau (EEB) report on citizen participation and environmental policies: Implement for Live “Power for the People”

Federalist Papers

- Young European Federalist statement on COP21 “A united European approach is essential to COP21”: JEF Europe calls for Europe to take the lead in Climate Negotiations
- Union of European Federalists Federal Committee resolution “Towards a strong common policy on Sustainable Europe”
- “For a Federal Europe: Sovereign, Democratic and Social” Manifesto for the 2019 European Parliament elections (chapter Fight Against Climate Change).
- Federalism and Climate Change: Towards a European and Global Green Deal by Domènec Ruiz Devesa
PRESENTATIONS & DISCUSSIONS

SESSION 1: THE COST OF CLIMATE POLICIES IN EUROPE AND BEYOND: HOW TO MAKE AMBITIONS AFFORDABLE?

Discussion on economic aspects of climate policies

Speakers:
Martynas NAGEVIČIUS, President of Lithuanian Renewable Energy Confederation

Presentation of proposals of the the Finance-Climate Pact

- discussion about consumption and reduction of incentives as tool for environmental action. Financing the transition comprises a wide spectrum of tax measures. The process imply deep analysis process of taxation systems.
- She elaborates concretely on the value of carbon pricing, Carbon taxes and carbon markets (ETS). Another tool, one of the most important ones, in financing environmental transition is the re-orienting finance flows as a way of financing sustainable growth (art.2.1(3) Paris Agreement).
- Lastly, she elaborates on the role of the international climate finance system, which in the last 20 years has seen a shift and re-oriented increasing the interest in monitoring the spending of countries in climate related finance.
- Find here the presentation The costs of Climate Policies: where are we now, European policies, financing the transition and costs of the Climate Policies.

Martynas NAGEVIČIUS, President of Lithuanian Renewable Energy Confederation

- Exchange of views on difference of the cost of producing energy in developing countries. Namely the costs of renewable sources of Energy such as the construction of solar panels.
- He analyses the case of Mali in comparison to Lithuania and other EU countries. Mali represents an example of early cases of climate refugees. Population cannot afford the living costs of the capital, to which they immigrate due to the expansion of the Sahara desert and other factors.
- This fact also show that there is not only an internal interest to fund climate action and energy efficiency, but also an external dimension of migrant flux control that should incentive the EU to assist developing countries in accessing to climate transition.
- Find here the visual used during the intervention of Martynas Nagevičius.

Climate-Finance Pact, The Agreement that could change everything, presented by Pauline Gessant, Vice-President of the Union of European Federalists

- How to finance the fight against climate change in Europe and in Africa?
- The Climate-finance pact, initiated in France and currently has presence all over the European territory and beyond.
- The Climate-Finance Pact has implemented tools favouring the fight against Climate Change such as the European Bank for Climate and Biodiversity and the European Fund for Climate and Biodiversity.
- Find here the presentation of the Climate-Finance Pact
SESSION 2: WHAT IS THE EUROPEAN UNION DOING ON CLIMATE CHANGE, WHAT CAN IT DO MORE?

Speakers:
Marius VAŠČEGA, Deputy Head of the European Commission Representation in Lithuania
Eva LICHTENBERGER, Austrian Green Party, former Member of the European Parliament
Domène RUIZ DEVESA, Member of the European Parliament

Eva LICHTENBERGER, Austrian Green Party, former Member of the European Parliament
- European Commissions’ proposals regarding prevention of dangerous climate change.
- Climate measures implementation in the transportation examples. Transportation Industry is still growing and counter-effects of the electric cars - climate neutrality is to be questioned. Road transport system has the problem that in many Member States there is no toll system.
- Freedom of movement vs road pricing in order to reduce high emission rates by reducing use of cars.
- Baltic railway was subject of discussions in 2004 which ended up to be a Baltic corridor (mix of trains and roads). As a result mainly roads were constructed instead of railways.
- Find here the presentation “What is the EU doing on Climate Change, what can it do more” by Eva Lichtenberger

Directorate-General for Climate Change, European Union Climate Action
- In the Paris Agreement, the world agreed in 2015 to limit global temperature increase to well below 2°C and to pursue efforts to limit it to 1.5°C.
- Under European Green Deal Commission President elect Ursula von der Leyen proposes to increase the EU’s target of reducing greenhouse gas emissions for 2030 towards 55%.
- Achieving climate neutrality in a just and social manner in only three decades from now will be very challenging. But it is also a great opportunity. And it could proof to be a project that can unite citizens again behind the European idea.
- Find here the presentation of the Directorate-General for Climate Action.

SESSION 3: HOW CAN EUROPE LEAD THE WORLD AGAINST CLIMATE CHANGE?

Speakers:
Wolfgang G. WETTACH, Board of the Union of European Federalists
Jarl KRAUSING, International Director of CONCITO – Denmark Green Think Tank

Wolfgang G. WETTACH, Board of the Union of European Federalists
- European Union, Climate and Security – Europe’s role in the world presents several claims of the speaker in terms of European climate and security policies.
- Readiness and vulnerability on personal, country and international levels.
- Find here presentation “EU, Climate and Security – Europe’s role in the world” by Wolfgang Wettach.

Jarl KRAUSING, International Director of CONCITO – Denmark Green Think Tank
- Introduction of the CONCITO Denmark’s Green think tank founded in 2008 with aim to help mitigate and adapt to the climate change.
- Knowledge based climate solutions to politicians, businesses and citizens and partnerships among different actors.
- The real challenge – global primary energy consumption
- Find here the presentation of CONCITO on Europe’s lead of the World against Climate Change.
SESSION 4: THE ROLE OF EUROPEAN CIVIL SOCIETY IN THE FIGHT AGAINST CLIMATE CHANGE

Speakers:
Pauline GESSANT, Vice President of Union of European Federalists
Lina PAŠKEVIČIŪTĖ, Environmental Coalition
Oliver GOTTSCHLING, KAS scholarship holder (Germany)
Edmunds CEPURĪTIS, project manager at Foundation for Environmental Education Latvia

Pauline GESSANT, Vice President of Union of European Federalists

- Fight against climate change is one of the European citizens’ priorities.
- Civil society actions to demonstrate the emergency of the need to take concrete actions – Youth for Climate and other citizen marches in 2019 in Germany, London, Portugal as well as in New York in 2014.
- Available mechanisms at European level permitting citizens act and have an impact on climate policies – Consultations, European Citizens Initiative, mass actions and demonstrations.
- Find here the presentation on European citizens’ role in the fight against climate change by Pauline Gessant.

Oliver GOTTSCHLING, KAS scholarship holder (Germany)

- The role of the civil society in the fight against climate change in Germany.
- Find here the presentation from KAS on civil society engagement in the fight against climate change.

SPEAKERS

Petras AUŠTREVIČIUS

Petras Auštrevičius is a Lithuanian liberal politician, diplomat, civil society activist, former member of Seimas, and since 2014, a member of the European Parliament. Petras Auštrevičius is also activist and former president of the Union of European Federalists in Lithuania.

From 1991 to 1992, Auštrevičius worked as a Senior Specialist and was the First Secretary in the Ministry of Foreign Affairs of Lithuania. From 2000 to 2003, he held the position of Director General at European Committee under the Government of the Republic of Lithuania, later serving as a lecturer at the Institute of International Relations and Political Science at Vilnius University from 2003 to 2004. In 2004, Auštrevičius became a Deputy Chancellor of the Government for European Union Affairs.

Elisabeth BAUER

Head of the Konrad-Adenauer-Stiftung (KAS) offices for the Baltic states and Nordic countries ELISABETH BAUER have been Head of the KAS regional office for Westphalia based in Dortmund/Germany and in Saint Petersburg/Russia. Main topics of her work in the Nordic/Baltic region are foreign and security policy as well as the establishment and further improvement of networks between Germany and the remaining countries around the Baltic Sea.

Edmunds CEPURITIS

Edmunds Cepuritis is an environmental activist, a founder and board member of Zero Waste Latvia. He has worked with environmental education and youth engagement projects in Eco-Schools programme involving more than 200 schools since 2014. He has written several articles in national media, organized several events and other outreach activities on the topic of climate change. He holds a Master's degree in Environmental science. Since 2017 Edmunds Cepuritis has been an active member of political party Progressives and in September has been elected as a co-chair of the party.

Pauline GESSANT

Pauline Gessant is a federalist activist since 2003 and took various responsibilities in JEF, European Movement and UEF. She was in particular President of JEF-Europe between 2011 and 2015. She is currently member of the Union of European Federalists - France, President of "Friends of JEF" (JEF alumni network) and member of European Movement - France Board. Currently she is European Vice President of the Union of European Federalists. She studied political sciences and hold a Master's degree in European projects at local level.
Jarl KRAUSING
Experienced International Director, formerly with several UN agencies (UNHCR, UNEP/OCHA) and the World Bank in areas of environment, sustainability and climate change / climate finance. Coordinated for 7 years the World Bank engagement at the UNFCCC climate negotiations, and represented the World Bank at various green growth fora, including the Green Climate Fund. Served as a Special Advisor to Danish Ministers for climate and environment. He has negotiated the SDGs on behalf of the Danish Ministry for Environment before assuming current position as COO and International Director at CONCITO - Denmark’s Green Think Tank. Master’s degree focused in Political Science from University of Copenhagen.

Christian KREMER
Christian Kremer is Deputy Secretary General of the European People’s Party (EPP) and Member of the EPP’s German member party, CDU. He is Head of the Policy and Strategy Department and in charge of the overall coordination of the EPP Ministerial. He administers the EPP Working Groups on European Policy, Economic and Social Policy, Membership and the ad hoc Working Group on Climate Change.
